

TITANIUM

A Technical Guide

Second Edition

Matthew J. Donachie, Jr.

Contents

Preface	vii	Chapter 7 Powder Metallurgy	47
Chapter 1 A Primer on Titanium and Its Alloys	1	Benefits of Powder Metal Processing	47
ReadMe.First	1	Alloys Used in Powder Metallurgy Applications	48
Why Use Titanium and Its Alloys?	1	Titanium Powder Metallurgy Production Processes	48
Titanium Metallurgy—A Short Course	2	Powder-Making Process.....	48
Getting the Most Out of Titanium Alloys	3	Consolidation and Shapemaking	49
Some Thoughts about the Future	3	Postcompaction Treatments	51
A Few Facts about Titanium and Its Production	3	Applications	52
Chapter 2 Introduction to Selection of Titanium Alloys ... 5		Cost Factors	52
General Background.....	5	Mechanical Properties	52
Selection of Titanium Alloys for Service.....	5	Chapter 8 Heat Treating	55
The Titanium Alloys	8	Why Heat Treat?	55
Application and Control of Titanium Alloys.....	9	Response to Heat Treatment	55
Titanium Alloy Systems Availability.....	9	Special Considerations in Heat Treatment.....	56
Evolution of Casting and Precision Forging	9	Stress Relieving	56
The Role of Processing	10	Process Annealing	57
Property Data	11	Solution Annealing (Treatment) and Aging.....	58
Chapter 3 Understanding the Metallurgy		Aging	60
of Titanium	13	Atmospheres, Contamination, and Post-Heat	
Crystal Structure and Alloy Types.....	13	Treatment Processing	61
Effects of Alloying Elements.....	14	Growth during Heat Treatment	63
Transformations and Secondary Phase Formation.....	16	Hot Isostatic Pressing.....	63
Titanium Groupings	17	Chapter 9 Joining Technology and Practice	65
Microstructural Development in Titanium Alloys.....	21	Joining a Reactive Metal	65
Chapter 4 Ingot Metallurgy and Mill Products	25	Weldability.....	65
General Aspects	25	Brazeability	66
Titanium Ingot Production	27	Weld Microstructure	66
Primary Fabrication	30	Weld Defects	68
Chapter 5 Forging and Forming	33	Welding Specifications	69
Forging.....	33	Joint Design Criteria and Limitations	70
Forming	36	Precautions in Welding Practice	70
Chapter 6 Castings	39	Fusion Welding Practice	70
Alloys Used for Casting	39	Arc Welding.....	73
Advantages of Cast Titanium and Titanium Alloys.....	39	Electron Beam, Laser Beam, and Resistance	
Casting Technology	40	Spot Welding	75
Design Considerations	41	Some Fusion Welding Process Comparisons.....	75
Effect of Weld Repair	41	Solid-State Welding Practice	76
Hot Isostatic Pressing.....	41	Brazing Practice.....	77
Heat Treatment.....	42	Chapter 10 Machining	79
Cast Titanium Applications	42	Traditional Machining of Titanium	80
Cost Comparisons	43	Nontraditional Machining Methods.....	83
Mechanical Properties	43	Surface Integrity.....	83
		Chapter 11 Cleaning and Finishing	85
		Special Coatings and Surface Finishes	85
		Cleaning and Descaling Problems	85

Removal of Scale	86	Chapter 14 Advanced Alloys and Future Directions. . .	131
Molten Salt Descaling Baths	87	Titanium Aluminides	131
Pickling Procedures Following Descaling	88	Titanium Matrix Composites	133
Removal of Tarnish Films	89	Other Process Techniques	134
Acid Pickling	89	Nanostructure Technology and Rapid-Solidification	
Polishing and Buffing	90	Rate Processing	135
Wire Brushing	91	Higher-Temperature Conventional Titanium Alloys	135
Removal of Grease and Other Soils	91	Closing Comments	136
Chemical Conversion Coatings	91	Appendix A Summary Table of Titanium Alloys.	139
Electroplating on Titanium	92	Appendix B Titanium Alloy Datasheets.	143
Other Coatings and Procedures	92	Other Sources of Information.	143
Chapter 12 Relationships among Structures, Processing, and Properties	95	Appendix C Cross Reference to Equivalent Titanium Alloys	283
Basic Properties of Titanium and Its Alloys	95	Appendix D Listing of Selected Specification and Standardization Organizations.	289
Structure and Hardening of Titanium	96	Appendix E Selected Manufacturers, Suppliers, Services	295
Interstitial Effects in Titanium	96	Appendix F Corrosion Data	307
Pure Titanium Mechanical Properties	97	Corrosion Rates	307
Alpha/Near Alpha Alloys.	99	Appendix G Machining Data	313
Alpha-Beta Alloys	99	Specific Data Listings	313
Beta Alloys.	101	Thermal Cutting	321
Relationships among Alloy Properties and Structures	102	Appendix H Weights and Conversions	327
Static Properties of Alloys	103	Appendix I Symbols	331
Cyclic Properties of Alloys	105	Appendix J Glossary	333
Cast Titanium Alloy Properties	110	Appendix K Selected References for Additional Reading	345
Powder Metallurgy Titanium Alloy Properties	114	Subject Index	351
Low-Temperature Service.	117	Alloy Index	369
Chapter 13 Corrosion Resistance	123		
Corrosion Behavior and Corrosion Resistance	123		
Corrosion Technology	124		
Uniform Corrosion Processes	125		
Alloying Additions and Corrosion.	126		
Localized Corrosion Processes	127		
Hydrogen in Titanium	128		
Stress-Corrosion Cracking	128		
Liquid Metal Embrittlement.	130
